

WHAT IS SPIDERTECH?

What is SpiderTech?

SpiderTech is the first to provide convenient, standardized and easy to use Pre-Cut Kinesiology Tape Applications, called "Spiders".

Each Spider is made of one continuous piece of Kinesiology tape so that it integrates with the body in a super-functional manner. The tape has a very specific elasticity built into the weave pattern of the cotton fabric, which mimics the elasticity and thickness of human skin, allowing it to integrate, support and stabilize without adversely affecting healthy ranges of motion.

Spiders are designed for specific body-parts: No need to design, no need to cut, and no anatomy and physiology knowledge necessary. Just follow the instructions on the package and this website! Some Pre-Cut Spiders can be used on multiple regions of the body, and our X's Y's and I's cover just about anything!

SpiderTech products are designed to be worn during strenuous exercise even in the pool. The non-latex adhesive holds when you need it to and

does not leave residue when removed.

What are the Spiders made of?

All SpiderTech products are made from the industry trusted Kinesiology tape manufacturer from Japan, Nitto Denko. With over 30 years of proven clinical results, it is simply the best tape you can get.

Nitto Denko Kinesiology taping products are engineered to mimic the thickness, weight and elasticity of human skin.

The material is made of high-grade 100% cotton with a 100% poly-acrylic adhesive. There is **no latex** in the product.

SpiderTech is water-resistant and breathable, and can be worn for many days.

SpiderTech Tape options

				
Upper Knee #5816	Full Knee #5817	Wrist #5828	Foot Support and Calf Strain #5818	Groin #5825
				
Hip #5823	Elbow #5827	Hamstring #5826	Postural #5824	Lower Back #5821
